

3-) Create a .Net Core Web Application with any frontend technology for Create, Edit or Delete operations.

There should be 2 pages. Index page should have a table component to display the existing Customers with an option to Edit or Delete a selected customer and Create a new customer . 2nd page CustomerInformations should include the textbox components and a save button for Create and Edit operations.

Create a new MSSQL database named "ACTestDB" and use the query file "AcTestDb.sql" to create Customer table. Database integration should be done with Entity Framework.
